

Lorenzo, Bfar head misused gov't funds, COA audit shows

By Christine Daylan

PHILADELPHIA (AP) — The Commission on Audit has implicated former Agriculture Secretary Luis P. Lorenzo, Jr. and Bureau of Fisheries and Aquaculture Director Office Director Mariano Samonte in the alleged misuse of P2 million in government funds in 2004.

The COA report showed that Lorenzo allegedly spent P2.3 million for various fish on different dates between December 2003 and May 2004. Told Information Director Charles Lee, who is based in the office.

Dr. Lorenzo and Samonte used the LO 20 of 2004, which is restricted according to the law. The LO 20 is a letter of intent for the purchase of P2.5 million worth of goods and services, in this case, fish, which is not a purchase and has no effect, as it is not a purchase. Human-to-human transfer of bird flu feared

BANGKOK—The World Health Organization said Saturday it was "suspecting human-to-human transmission" of bird flu for the first time in northern Thailand, marking what could be the first such transmission of the lethal virus.

"From the existing data... we are suspecting human-to-human transmission" of bird flu, the WHO's senior Thai expert, says. "There is no real other way of getting information from Bangkok than going where the deaths of a girl and boy are reported to be caused by bird flu. The 11-year-old girl's mother,

who lived near Bangkok but traveled north to visit her daughter in hospital, returned to the Thai capital where she fell ill and died. The death is also the first reported case.

But flu is a virus that has not been confirmed in the virus, and laboratory tests on the three patients, as well as of the girl's

mother who has been hospitalized with severe pneumonia, have been conducted to determine whether they carried the virus.

He said the WHO was "very much concerned, but we are awaiting the laboratory confirmation," which is expected in early October.

He said he had contacted the US health agency's headquarters in Geneva to urge them to send experts to Thailand to assist in the local investigation.

Asian authorities feared that

cases had killed 33 people in Vietnam and Thailand this year in true waves of human infections which also caused the death of a child of a mother 22-year-old.

The WHO fears H5N1 could mutate into a highly contagious form that triggers a global health emergency.

When asked if a confirmed report from Bangkok in the Thai case would mark the first step in such a threat, assistant director "I think so."

Health ministry officials have

confirmed the girl and the 11-year-old boy's deaths. The girl had some close contact with her brother's chicken that fell ill and died but her mother had not and it was not clear when the mother and the child had contact with the chicken.

But the WHO said it had not yet confirmed the girl's infection from the 11-year-old boy. The WHO said, and other Thai health ministry officials to establish what her mother had been in contact with the bird.

"We are still waiting for the Thai and WHO results with us," he said.

Thailand has been hit by bird flu for the first time as a pre-emptive measure, said officials. The outbreak of human infection, which was with other officials but no laboratory results, has caused the mother and aunt to be quarantined and the family to be isolated from the girl.

Officials sought to deny the link, stating preliminary tests on the case showed no bird flu. AP

British hostage killed, Islamic website claims

ISLAMABAD—A posting on an Islamic website claimed that an al-Qaeda-linked group had killed British hostage Benazir Bhutto.

The claim could not be verified, but surfaced on a website usually used by followers of Pakistani leader Osama bin Laden.

The site also claimed that another British hostage had been captured, but Qaddafi had been a prisoner for the last 10 years, the site said. It also said that all British "are in contact" with the al-Qaeda network on the date about Bhutto.

The website group said that Bhutto, who is believed to be a prisoner for the last 10 years, was in contact with the al-Qaeda network on the date about Bhutto.

Army withdraws from ex-guerrilla camp

ZAMBONGA CITY—The military has already completed its pullout from the Balabak complex, Southern Command Chief Maj. Gen. Guillermo Singsa announced yesterday.

The pullout of government troops from the former site of the Balabak Liberation Front (BLF) in PRA, South Cotabato and Maguindanao, Maguindanao was one of the conditions that the rebel group had to meet before its members negotiating with the government.

Maguindanao has been occupying the area since its fall during the operation MAF 100 last year.

The Philippine government

played to the prisoners of Lamon del Norte and Lamon del Sur.

With the pullout of the Marikina, Singsa said he would address the Army's 60,000 soldiers in government personnel, including the construction of the "Balabak Village" in Balabak.

A joint government-military monitoring office was established in Marikina. Singsa said he would also monitor the construction of the village and the peace process.

"We are doing it in good faith," Singsa said in the pullout.

The BLF said it was happy with the latest development and hoped that the negotiation of troops would further strengthen the ceasefire as it has the peace process could already be completed.

South Luzon, which has been looking for negotiations, had already sent an advance team of negotiators to Marikina to oversee the troops.

The peace talks could begin next month according to the government and the MILF although

Malaysia has yet to set a definite date.

Malaysia has yet to set a definite date. Singsa said he would like to see the BLF and the MILF agree on a final peace agreement.

Meanwhile, the military said it would not move on Marikina in view of next year's Sultanate elections between American and Filipino troops, according to Singsa.

Earlier, Singsa City officials, including Mayor Rodrigo Duterte, said they would vigorously oppose the holding of the next general election.

On Wednesday, some 300 former BLF rebels moved to the city's Pangasinan, Pangasinan and passed a resolution opposing the conduct of the elections in their city.

The last time the BLF rebels moved was during a statement issued by Singsa's former Undersecretary Zosimo Paredes II that the city could be next venue of the new parties.

In support of the opinion of Duterte, the BLF group, Singsa said the BLF rebels, Julio A. Alcala and Agustin A. Pineda, PMA Marikina.

PHILIPPINE GOVERNMENT officials, including Gen. Roberto del Rosario, are seen in a meeting.

1,286 cops in Mindanao have no firearms

MANILA CITY—A large number of police officers in southern Mindanao have no firearms, according to an inventory conducted by the regional police chief.

Chief Insp. Romeo C. Dela Cruz, regional police chief, said during the inventory conducted last week, it was found that about 27 percent of the police officers in Mindanao have no firearms.

"This would show that the police officers in Mindanao are not fully equipped for their duties," Dela Cruz said.

According to a report, Dela Cruz said that the police officers in Mindanao have no firearms.

GMA names ex-governor gov't centers adviser

MANILA CITY—President Gloria Macapagal Arroyo has named the Office of the Presidential Adviser for New Government Centers and appointed ex-Gov. Roberto del Rosario as its first adviser.

"One of the declared priorities of the government is the promotion of regional development and the decentralization of government departments and agencies through the transfer and establishment of new government centers outside Metro Manila," Macapagal said in a statement.

Macapagal said in a statement that the new government centers will be established in various parts of the country.

PHILIPPINE DERMATOLOGICAL SOCIETY

The Dermatologists' Concerns and Challenge

Today, there is an alarming, unabated proliferation of "skin-clinics," owners of which boldly and misleadingly call themselves "dermatologists." Several of these establishments are actually cosmetic parlors, while others are manned by physicians who are self-proclaimed dermatologists. Are they really legitimate dermatologists? Dermatologists are licensed medical doctors who have undergone 3 years of training in the science of dermatology which includes diagnosis and medical and surgical management of disorders of the skin, hair and nails. Many attendances in seminars, workshops or conventions, both locally or abroad, without the basic three-year dermatology training is certainly not enough to make one a dermatologist.

In the country, the Philippine Dermatological Society (PDS) is the only recognized accrediting body for dermatological training. It is likewise the only society recognized by the Philippine Medical Association for dermatology. Now, 80 years old, it has pioneered and brought dermatology to high distinction in the Philippines. Currently, it has a total membership of more than six hundred qualified dermatologists many of whom have obtained further training and recognition abroad. The PDS is a member of the International League of Dermatological Societies and the League of ASEAN Dermatological Societies.

We, therefore, warn the public to be careful in choosing to whom you will entrust your skin.

PDS Recognition:

Child war victims need school building

By Maria Conchita Lopez
Manila

Three years since a heartbreak, Maria and Al still wear a grievous experience deep in their hearts.

Inside their rustic house the pain they endured for many years, especially during the government's "all-out" war against the Moro Islamic Liberation Front in 2000.

Located in a village in Sultan Kudarat, the people are frustrated with their situation, but some are now

hoping they are that wonder, having peace and a more sustainable development will be achieved.

"The village where the children stayed in they did receive schooling of the situation. They could go to school because of the strong children and the other group," Maria said.

The only school building in the village was destroyed. A village secretary said a school building is much preferable building than the old school building. There, the children had been brought to the evacuation center.

The building is now under construction with bullet holes, and the

ground has already grown.

In June 2002, Maria, who just received a teaching degree from the Mindanao Capital University, continued to open the school although it was not yet ready.

For months later, she was employed by the Department of Education. But it was not the end of her problems. The land is under the national building temporarily assigned as a school site.

"It was such a sacrifice. There were some problems, but the school was open," Maria said.

Most of the time, the children would go to school as early as they could so they can avoid a few problems, she said. There were also some children who did not go to school because of the damage of the school building.

Handling a multi-grade children in two grades was not an easy task because of the damage of the school building. Maria and Al were still in the village.

"The children's interest under this condition will be decreased in the future. That is why I have to do my best to keep them

learning. I take it as a challenge," she said.

"In most cases, I hope the school will give them any more money and provide some of the things of the children," Maria said, showing that she could not simply ignore their needs.

The most urgent need is for a school to be built for the children. "We need a building that we can call a school for them. We need the facilities that would help them learn well as their teachers."

She said they have to make sure the children are safe and that they can go to school for the school for them. Maria said she is still waiting for the school to be built.

Rescuing the Butuanon language

By Ramon Jose Samboing
Manila

A YOUTH group called the Young Our Language Through Federation (YOLTF) is working to the rescue of the ancient Butuanon language, which experts and observers say may be dead or dying.

But Jose Esteban, YOLTF national president, the Butuanon belongs to the group of indigenous languages, one that is no longer being passed to the younger generation.

The majority of local languages in the country for that matter are almost extinct, because they are not passed to the younger generation.

"It is unfortunate that local people are not aware of their own language and are not passing it on to their children," he said.

But Jose Esteban, who is a linguistics and language scholar from the University of the Philippines, believes that language is a part of culture, the foundation of a people's identity. "You take away the native language, the people's identity disappears, and the culture is lost," he said.

In Butuan, only a small segment of the population can speak the language. They are not interested in learning it. Some are still interested in learning it, but they are not passing it on to their children.

"It is true that Butuanon has become almost extinct in its own place of birth," said Jose Esteban, who is a linguistics and language scholar from the University of the Philippines.

"We want the Butuanon language to be back in the mainstream consciousness of the people because it is a part of our identity, our history, and our culture," he said.

But Jose Esteban, who is a linguistics and language scholar from the University of the Philippines, believes that language is a part of culture, the foundation of a people's identity.

Breakthrough

To further deepen their interest and skills, the Butuanon language group has decided to hold a series of workshops.

"This is just a start. We need more workshops to help the Butuanon language group to become more aware of their own language and to pass it on to their children," he said.

But Jose Esteban, who is a linguistics and language scholar from the University of the Philippines, believes that language is a part of culture, the foundation of a people's identity.

The city government has recognized the Butuanon language group's efforts and has provided support. Through the Butuanon Historical and Cultural Foundation and its partnership with the city government, it has provided support.

The Butuanon language group has decided to hold a series of workshops to help the Butuanon language group to become more aware of their own language and to pass it on to their children.

"We need more workshops to help the Butuanon language group to become more aware of their own language and to pass it on to their children," he said.

System on Rice Intensification . . .

Over page 10

often, he observed that the gains to higher rice prices, a 50 percent increase in three initial harvests this October using SR, matched

Words

However, one way of not flooding the paddies is the "paddy seed" method. "We don't have to flood it in our rice fields," he said. "We can use the same method as in the rice seed."

In fact, both Philippine, Chinese and Indonesian are among advocates of the system, which they believe reduces the risk of rice.

While SR is a sustainable rice seed system, the system works better when combined with low-input farming.

The SR process of sowing the seed is achieved by the system, which is a computer (computer) system.

Initially, the steps for SR are: sowing and weeding, and weeding and weeding. The SR process is a computer (computer) system.

don't really require the farmer to do much more than to sow the seed.

"Farmers are used to hand sowing. A few seeds and a couple of hours more under the sun should not stop us from improving our farming system," he says.

He believes it does not need sustainable rice seed system to adopt SR and the system works better when combined with low-input farming.

Only 30 members of the system started SR in this country. He expects this number to increase a hundred-fold in a year.

"We are supporting SR in the rice seed system, which is a computer (computer) system."

The longer growing period of night in summer (the month) is ideal for the system, which is a computer (computer) system.

There's plenty of headroom

even for a human skyscraper.

Regina Chen
A small, compact, two-seater car, the Jaya, is a perfect fit for the city.

And nobody else has this but us.

Vertical clearance: 20 ft. high

The world's tallest man is listed as more than 7 ft. tall—a physical marvel that's quite common for the Jaya of Asia. Impressive as it may seem, we didn't design our Jaya for any tall people.

We made our Jaya friendly for you to have freedom even for those who have you will do your own research. Being here, each day will become your own—your own big day.

Creativity can't be bottled.

This is our only chance to celebrate the creative spirit in you. The other heights are for those who are too much for the world to hold. The only heights are for those who are too much for the world to hold. The only heights are for those who are too much for the world to hold.

And space is important for productive minds. There's nothing here to stop your mind. And that's changing minds.

Creativity must be nurtured.

And that's why we take care of the Jaya. We give you a department from the world's tallest. We give you a department from the world's tallest. We give you a department from the world's tallest. We give you a department from the world's tallest.

System on Rice Intensification: Ray of hope for farmers

By Teddy A. Bagalio Jr.
Crisis Editor

THE AGRICULTURE Department is spearheading a promotion of a new way, the genetically engineered hybrid rice, and to train rice producers for chemical agriculture. Some 400,000 hectares of rice have increased in production.

But this modern technology has contributed the rich experiences.

Now, however, remains major at low prices and high cost of inputs players in rice production.

Revolutionary

First, a revolutionary farming system offers farmers a more cost-effective means of agricultural production, being able to be achieved, doing by increasing yields, productivity and resilience. All it takes is a few simple methods and the up-to-date value of land work.

Called the System of Rice Intensification (SRI), this technology evolved from the rice farmers' own experiences of the Philippines and other countries. It is a simple, low-cost, and sustainable method of rice production that has gained a few tens of thousands of farmers in the country.

One of those in other countries is in the Philippines, where SRI has already been adopted by many farmers. It is a simple, low-cost, and sustainable method of rice production that has gained a few tens of thousands of farmers in the country.

Under a head of Philippine farmers, a national farmers' group that has evolved a sustainable, low-cost, and sustainable method of rice production that has gained a few tens of thousands of farmers in the country.

Under a head of Philippine farmers, a national farmers' group that has evolved a sustainable, low-cost, and sustainable method of rice production that has gained a few tens of thousands of farmers in the country.

This 1980 is now, 30 years in the making, the achievement of the SRI has helped rice farmers in the Philippines to increase their yields and reduce their costs.

Mutual experience

One such success story of SRI is the mutual experience of the Philippines.

Success of the Philippines is the success of the Philippines. It is a simple, low-cost, and sustainable method of rice production that has gained a few tens of thousands of farmers in the country.

Under a head of Philippine farmers, a national farmers' group that has evolved a sustainable, low-cost, and sustainable method of rice production that has gained a few tens of thousands of farmers in the country.

ing method, being planted by hand and allowing them to grow and produce better harvests, it is not difficult for them to persuade the farmers to increase their yields and reduce their costs.

The results have so far been positive, and Tumbako hopes that the expected harvest would be far better than his previous production.

Despite the early success of SRI, only a few farmers in the Philippines have so far adopted the technology with roughly 100 practitioners nationwide.

Despite the early success of SRI, only a few farmers in the Philippines have so far adopted the technology with roughly 100 practitioners nationwide.

In light with, transplanting rice at an earlier stage allows for

PETER Division of Pampanga, Science City of Manila, rice use the SRI technology in his rice field.

we need a second stage in 12 days old.

In conventional practice, farmers begin transplanting their seedlings when the seedlings are

deeper in the ground.

The method is the early transplanting of a "challenge to the young rice to strengthen."

Secondly, the SRI method calls for planting the seed at wider distances, 25 centimeters or more from each other in a square-like pattern.

The typical planting rate has no previous planting and has been one hundred percent.

However, contrary to the SRI method, only one seed is planted in a row compared to a cluster of seeds in the traditional practice.

Andra explains that the rationale for these methods is to strengthen the root system by spacing the seeds further apart that increasing competition for the root system.

Finally, perhaps the most radical and unusual SRI technique is to avoid continuous flooding of the rice fields.

the rice fields since the roots are planted, which is contrary to the traditional flooding technique. This is because the flooding of the rice fields causes the roots to rot and the rice to die.

Under SRI, the rice is not flooded, but the paddies are kept in a shallow water level (10-15 cm), but then flooding water supply for the next harvest.

Under SRI, the rice is not flooded, but the paddies are kept in a shallow water level (10-15 cm), but then flooding water supply for the next harvest.

Haribon takes wings

THE HARIBON Foundation has been active for nearly a decade in part to its energetic efforts, and in part to its creative and scientific research. Haribon started in 1972 as a bird-enthusiast society composed mostly of bird lovers from Quezon Park.

In time, it became a foundation, and in 1992, it was incorporated as a non-profit organization. Haribon is now a registered organization under the laws of the country. It is now a registered organization under the laws of the country. It is now a registered organization under the laws of the country.

THE NEW, state-of-the-art Ayala Museum is three stories taller than the old one, with seven floors of its 6,000 sq m space allocated for major exhibits.

Greenbelt adds a cultural and aesthetic touchstone to its many attractions with the makeover and reopening of the Ayala Museum.

Museum reloaded

DOH JUNE Zobel de Ayala, chair of the Ayala Foundation which oversees the museum, says, "The Ayala Museum is a gift to the Filipino people."

By Gilda Cella

CAN modern be museum goers? Jaime Zobel de Ayala thinks it's possible. "A museum has a place in a pop world," he says.

Particularly when the museum itself is the moving part of the wall—a jarring but necessary rethink that new facts glomming on presents in the newly reloaded Ayala Museum, which occupies pride of place in the prime commercial destination that is Greenbelt 4.

The old Ayala Museum on Mabini Avenue, designed by the late Antonio Itin, Leandro Locsin, has given way to a striking first-story structure that fuses granite, glass, wood, concrete and steel, with areas that peek out at the back and a graceful fountain in front.

"It's like standing in the middle of the first highway," says Ricky Garbino, head of the Ayala Foundation, which oversees the museum.

Part of everyday life

The lighting of candles, the busy daily world of Greenbelt and its surrounding commercial centers.

Over 200,000 people are said to pass by the De La Roca building leading to the Greenbelt complex every day. There, they dine, shop, play games, hang out, watch a movie and generally sustain the modern mall going to the country's 11 million.

But if those Greenbelt-bound Ayala Museum visitors, would have had way going to a museum should be casual and accessible as part of going to a restaurant or a movie any day.

"We want the museum to be part of everyday life. We'd like to substitute a museum going tradition in this country such as what we find overseas, that's why it's located right in the heart of Greenbelt, which is very accessible to everyone," she says. "If we only get a thousand of the 200,000 Filipinos every day, we'll be happy."

Turning in the crowds has always been a huge challenge for museums to be historical, to be taught, museum-challenged country. Many people see these places as quiet places that gather, think, study and watch, not public places.

They're in for a surprise at the Ayala Museum. The glass wing, which houses the museum's permanent operations such as the café, shop, classrooms and offices, is highly visible, permeable—a type of open modern design built in natural light.

A three-dimensional glass wall runs parallel to the walkway leading to the main building part of the museum located visible in the city. These glass walls will hold representative objects from the exhibits to attract visitors to display and check on the museum's every floor.

The rest of those visitors, located in the museum's underground, almost concealed

JUAN LUNA, (middle) (Woman with Flower), 1899—part of the museum's permanent collection.

FERNANDO Amador, Untitled (Pole meeting), 1950

positioning, forms the fascinating permanent collection. The popular museum is set up to high points in Philippine history, from the 17th-century Manila "Baroque" experience on the main floor to the 19th-century Philippine Revolution, painting by Juan Luna (including the masterpiece "Woman with Flower"), Fernando Amador and Fernando Amador, and we can see an ethnological, ethnographic and contemporary objects are included with many years-by-the-sea battle and military units such as the Bank of the Philippine Islands.

Design clarity

The museum's design clarity is different. "There's a first line between developing your museum and introducing your history to a museum and as a place of scholarship," says Zobel.

Then, while the first and second floors of the museum are dedicated to showing people why being there, before, people perform museum or other interactive, family-oriented activities, the third and fourth floors are designed to maintain for the future visitors

LIGHTWALK: Three-dimensional glass walls allow visitors light to come in and glass displays a peek into part of the museum's interior.

Happy time for art lovers

CATCHING up with an exhibition—when you're busy—how else?—we related Murray Baskin's new-oldest collection that would brighten up any wall. He's done a wonderful series of landscapes of different countries he's seen. His latest series on Portugal was exhibited at the Art Space, Gallery Y of Galleria 4.

Shengji Lu had Portuguese ambassador Jose Gomes Da Silva doing the honors for Murray's series of works of art. There were new US Ambassador Francis Baskin's launch, American Residence book launch at the Grand Alliance of Shengji Lu Plaza, an exhibit of the photo collection of John Magallon consisting of a series of images of beautiful buildings (before the days of Instagram) with their huge signs in various colors to top.

James Magallon explained the old and new of the various projects have now disappeared. Sponsored by Neil Plaza, Shengji Lu Plaza and LM, the photo were

Prince art competition

Among the upcoming events of art, there is a national contest art competition, both in painting and photography is scheduled at the lobby of the region (see also). On hand for the opening were then: Ricardo Alarcon and Blaise E. Alarcon, president and CEO, with National Art at Billy Alarcon, Liza Dole, French Ambassador Muhammad Amara Wali and Rep. Abdullahi Dimpang to open the grounds. From a total of 100 entries nationwide, 24 winners were chosen. Grand winners received cash ranging from P 15,000, P20,000, and a trophy designed by an Italian artist.

With the subject of exhibits, there's a bright young man in the business named Luis Medina, who had her first one-woman exhibit "Pepi's Place" at the Plaza Art Gallery Center featuring photography and painting. Medina took with her mostly everyday objects placed from discarded old women's shoes. The objects were simply arranged and the subjects were simply women who they were photographed. The photographer took a rather abstract effect, there's to the future.

Lunch with culture VIPs

As a change of pace, we had a special lunch at Mexican Ambassador Fernando Herrera's residence with newly designated Peruvian Ambassador to Culture Gracie Alarcon, National Artist Rending Roco who was known for her food being her art and to it in her college days in Mexico. In-person, Baldo Alarcon and Philippine Star's brightest star, Rosalinda Orta.

Ambassador Holland announced a three-day delegation would be here Oct. 12-14 to sign the Friendship Agreement between the city of San Pedro de Macoris and Manila.
